

conOperationScheduling - innovative ERP add-on for detailed planning

Key Facts

- We know the existing processes of interactive SAP production planning, such as the PPDS planning boards or the old ERP planning boards, inside out, but our claim is more
- With conOS, an SAP add-on, we show the power of the latest SAP technologies.

Benefits

- Ergonomic, intuitive SAP UI5 interfaces
- Push technology (events are taken over into the planning without manual refresh)
- Customer-specific extensibility (e.g., texts)
- Flexible rules for customization (colours, columns, ...)
- Consider order networks
- Different visualization options for optimal user support: planning board, work calendar or tabular planning board

Functions

- Graphical planning of operations
- Setup/processing/feedback
- Visualize utilization curves
- Note key dates
- Maintain non-working hours
- Automatic & Manual planning – drag & drop
- Maintain a strategy profile
- Simulation
- Setup optimization
- Personnel allocation

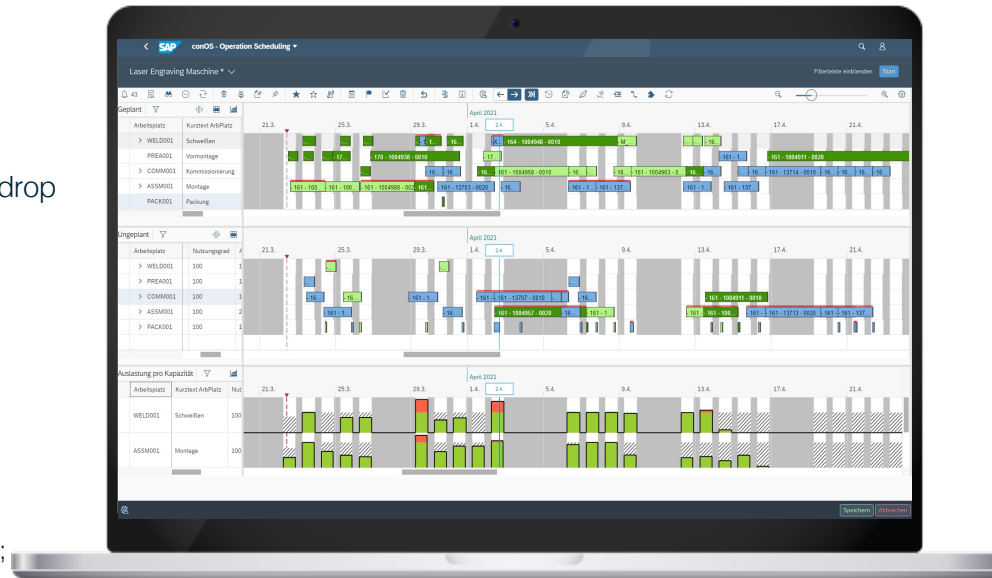

Highlights

- Short- or medium-term planning is highly dependent on changes due to production progress, goods traffic, incoming customer orders, and machine conditions - with conOS, such events hit the planning immediately.
- Interactive planning becomes a control station or simply a monitor for the store floor.
- Intelligent rules allow you to determine how planning should react to production progress.

Technicals

- Standard version runs on S/4 HANA 1909; architecture ready for lower releases and connection to SAP ME
