

# conPIP - Process Integration Platform

## Key Facts

- conPIP – a cloud based application
- Different communication channels
- Different message formats
- Different authentication scenarios
- Action no. and status per business transaction
- Autonomous processing per business transaction
- Separate release update per business transaction

## Benefits

- Digitalization of previously unstructured paper-based processes
- Centralization of heterogeneous interface landscapes
- Creation of more transparency, efficiency and synergies
- Security, high availability and scalability
- Variable connection of source and target systems

## Functions

- UI application integration
- Role-based user administration
- Customizing of the business transaction
- Administration of external partners / organizations
- Selection of actions by date as well as other criteria for the business transaction
- Logbook for all activities of the engine

## Highlights

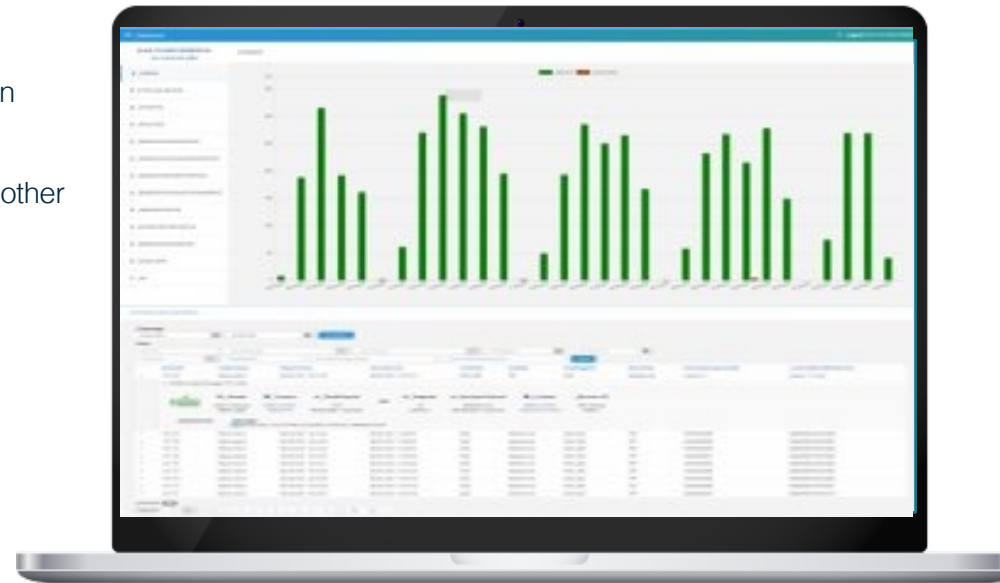

- Dashboard
- Monitoring per business transaction
- Integration of a workflow engine
- Organization and user management
- Reporting with autom. message output
- Multiple Languages DE / EN / ...
- Payment model Pay per Use

## Technicals

- Microsoft Azure Cloud
